

Assignments 3

Troubleshooting Theory and
Practical

1. List 5 common issues users face with USB keyboards or mice on laptops, and write one possible solution for each.

No.	Common Issue	Simple Solution
1.	Keyboard or mouse is not working	Unplug it and plug it into another USB port.
2.	Mouse is moving slowly or not moving	Clean the mouse sensor and use it on a flat surface.
3.	Some keyboard keys are not working	Clean the keyboard and check if the keys are stuck.
4.	USB device keeps disconnecting	Try a different USB port or reconnect the device properly.
5.	Laptop does not detect the keyboard or mouse	Restart the laptop and connect the USB device again.

2. Simulate a troubleshooting flow: Your Bluetooth headphones are not connecting to your phone. Write the exact step-by-step actions you would take to diagnose and fix the issue, mentioning any settings or indicators you would check.

❖ **If my Bluetooth headphones are not connecting to my phone, I would try these steps:**

1. Check the headphones

First, I would make sure the headphones are turned on and have enough battery.

2. Check Bluetooth on the phone

I would open Settings → Bluetooth and make sure Bluetooth is turned on.

3. Check the headphones in the Bluetooth list

I would look for my headphones in the list of available devices. If they appear, I would tap on their name to connect.

4. Put the headphones in pairing mode

If they do not appear, I would press and hold the Power/Bluetooth button until the Bluetooth light starts blinking.

5. Move the headphones closer

I would keep the headphones close to the phone and try connecting again.

6. Turn Bluetooth off and on

I would turn Bluetooth off, wait a few seconds, and turn it back on.

7. Forget and reconnect the headphones

If they still do not connect, I would tap the headphone name, choose Forget/Unpair, and then pair them again.

8. Restart both devices

Finally, I would restart my phone and headphones and try connecting one more time.

9. Check the connection indicator

After connecting, I would check if the headphones show Connected in the Bluetooth settings and play some music to make sure the sound is coming through them.

3. A user reports that their external webcam is not detected during a Zoom call on Windows 10. Write a checklist of 6 things to check or try to resolve the problem Hint - Consider device manager, privacy settings, and app permissions.

❖ **If an external webcam is not working in a Zoom call on Windows 10, I would check these 6 things:**

1. Check the USB connection

Make sure the webcam is properly connected to the USB port.

2. Try another USB port

Remove the webcam and connect it to a different USB port.

3. Check Device Manager

Open Device Manager and check under Cameras to see if the webcam is listed.

4. Check Privacy Settings

Go to Settings → Privacy → Camera and make sure camera access is ON.

5. Check Zoom camera settings

Open Zoom settings and select the external webcam as the camera.

6. Restart the laptop

Restart the laptop and connect the webcam again. Then test it in Zoom.

4. You are helping a friend whose printer is showing 'offline' status on their PC. Describe how you would use the Windows Troubleshooter tool to try to fix the issue, and explain what information the tool provides during the process.

❖ I would use the Windows Troubleshooter like this:

1. Open Settings

Go to Settings → Devices → Printers & scanners.

2. Select the printer

Find the printer that is showing Offline and click on it.

3. Run the Troubleshooter

Click Manage and look for the Troubleshooter option.

4. Let Windows check the problem

Windows will check things like the printer connection, drivers, and printer settings.

5. Follow the instructions

If Windows finds a problem, it will show what is wrong and may suggest a fix.

6. Check the result

At the end, the tool tells me whether it found a problem, fixed it, or could not find a solution.
